

SELEX Communications TETRA equipment is TEDS ready

TETRA Enhanced Data Services (TEDS) is a wide-band technology defined in the TETRA 2 standard to enhance data rates of TETRA networks

If you are uncertain what applications the future will require from your TETRA system your investment today shall be safeguarded through the purchase of future proof solutions.

SELEX Communications was driving the development of TEDS and is one of the very first companies to implement TEDS technology into its standard products. Our TETRA equipment assures the migration path towards future wide-band data applications.

SELEX Communications current TETRA networks can be gradually upgraded to TEDS according to your needs. The new system platform is designed to be fully "TEDS compliant"

Highlights of TEDS

- Backward compatibility to TETRA 1
- Flexible user data rate performance
- Comprehensive security features
- Adaptive multi level modulation for best throughput in all signal conditions
- Efficient and flexible use of spectrum resources
- Minimal need for new sites

Additional benefits of the SELEX Communications TEDS solution:

- Minimum investment in network upgrade to TEDS
- Gradual migration towards TEDS when and where required

TEDS functionality implementation priority depends upon the customer interest and the business opportunities - Talk to us in defining your strategy
